a No convergence
False calls + 1
Rate-jump intensity
b 2% of genes convergent
Realised FDR (q = 0.1)
Rate-jump intensity
c Power by kind of change
Power (final test)
Selection + rate
Selection (ω)
Rate only
weak
moderate
strong
Effect size
d Signatures of called genes
Exact signature accuracy
weak
moderate
strong
Effect size
e Power by number of origins
Power (final test)
Independent origins
f False discoveries by origins
Realised FDR (q = 0.1)
Independent origins
Naive (RERconverge-style)
Control-lineage permutation
Naive, Fisher over layers
Brownian phylo-LMM
Learned-covariance GLS
GLS + leave-one-origin-out
