This method (simulated null)
Same statistic, GLS p-value
Fisher exact, no phylogeny
a 3 origins
b 6 origins
c 10 origins
Power
d 3 origins
e 6 origins
f 10 origins
False discovery proportion
Penetrance
g Calibration of loss nulls on real data
GLS t-test
Control sets, 200 available
Control sets, 142 available
Simulated, species error
Simulated, species × gene error
60% (5.1 false calls per set)
20% (0.25 false calls per set)
10% (0.15 false calls per set)
5% (0.05 false calls per set)
8% (0.1 false calls per set)
Matched control trait sets with any loss call (%), real genomes
